

What is **the cloud** and why is it **the future**?

In the past:

Cooperatives, MFIs, MFBs, rural banks and financing companies bought and managed on-premise MIS and IT systems

Today:

Cooperatives, MFIs, MFBs, rural banks and financing companies access Oradian's digital MIS with an Internet connection

- The cloud is **a network of secure data centres that are connected to the Internet and managed by IT professionals**. The cloud stores all of the software and systems your institution needs including Instafin, Oradian's digital MIS.
- With Oradian, financial institutions store their client and business data in **secure data centres**. All you need to access Instafin is an Internet connection on a desktop, mobile phone or any device.
- The cloud frees you from installing and managing your own networks, servers, systems and software licences, **so you can invest in your growth and your future**.

Three ways the cloud makes you **ready for the future**

1. Reduce your operational costs

With just an Internet connection, you access Instafin. You no longer need to install software, setup data centres and servers at each of your branches. This makes it easier, faster and less expensive to grow.

2. Create reports with just a few clicks - at any time

You can instantly create financial statements and performance reports using data from all of your branches. With just a few clicks, you have accurate, real-time insights about your entire financial institution.

3. Maximum security and reduced risks

With Oradian, your clients' data is stored in one of the most secure data centres in Europe. This means your clients' data is less at-risk. In the case of a natural disaster in your community, you will not lose clients' data and your business can play a bigger role in helping clients recover.
