## Transforming your data into *business intelligence*

Business intelligence is your financial institution's strategies and tools for analysing data about your business. As a leader of your financial institution, you make critical decisions every day that affect your clients' experience, team's performance and profitability.

To make wise decisions, you need business intelligence about your daily, monthly and yearly operations. Efficient End-of-Day or End-of-Month processes and yearly reports rely on an efficient core banking system.

If your system is down or running slowly, the entire reporting process is delayed, the reports are incorrect and your team works overtime.

*Through our core banking platform, Oradian enables you to access the business intelligence you need to successfully lead your financial institution.*

### Easily consolidate reports from all of your branches

Your team needs to ensure all business transactions from the day are processed correctly before closing your business for the day. Similarly, at the end of every month, your team needs to run End-of-Month procedures to accurately balance and close the books.

Oradian's team works with financial institutions around the world to ensure they have accurate, real-time data at their fingertips. This is part of the Oradian journey which includes:

- Migrating your data from notebooks, spreadsheets or a previous core banking system to Oradian's platform
- Cleaning the data to remove duplicate entries and errors
- Training your team how to digitally enter data

Oradian's cloud-based core banking platform offers automatic and continuous consolidation of all operations and branches. This means that your data is available in real-time and enables you to monitor business performance.

### Make informed strategic decisions with Oradian Business Intelligence functionality

After you have digitised data, you can generate business intelligence. Oradian's Business Intelligence function enables you to create reports independently at any time, without additional costs.

*With Oradian's Business Intelligence, you react more quickly to changes in your business or in your market, make informed decisions and miss fewer opportunities.*
