

custom code°

Your logic seamlessly integrated.

Unlock the agility your market demands
with Oradian Custom Code°

oradian°

Unmatched control, flexibility, scalability, and speed.

Oradian's Custom Code° empowers financial institutions to excel in dynamic markets, offering flexible, lightweight coding options that can be implemented directly into the system for tailor-made solutions.

Popular use cases:

- 1 Specialised calculations**
Easily implement product-specific requirements, such as "Apply a late fee of X if an account is overdue by more than X days."
- 2 Enhanced reporting**
Create custom formulas and add unique data tags within Oradian's advanced reporting system to generate insights that meet your exact needs.
- 3 Build custom APIs**
Oradian offers a broad set of APIs, but sometimes specific workflows require a unique API. For example, if you need to combine "create account" and "edit account" actions, you can build an API to do just that directly within the system.

What Oradian provided us is both the beauty of being a cloud-hosted, ready-made solution, but with our ability to develop it further using modern software development techniques. It makes it so much more future-proof in terms of how you build your IT organisation.
